DESCRIPTORS: *Cotton, Plants. *Boron. *Fertilizers.
Dosage. Growth substances.

Application of microdoses of boron accelerates develop-
ment and ripening of cotton, reduces the percentage of
fruit organs dropping off. Increases the yield of raw
cotton as well as the percentage of seed in the boll and
the oil content of the seed. In view of the low mobility
of boron compounds through the cotton shrub, the best
means of applying microdoses of boron is by applying it
fractionally: part prior to sowing into the soil and part
